U.S. Patent No. 5,960,411 A

Method and system for placing a purchase order via a communications network

CHARTED AGAINST Amazon.com 1-Click and Buy Now ordering, Amazon

Patent owner's own product. Patent expired in 2017.

PATENT RECORD

EXHIBIT A-3

ASSIGNEE	Amazon.com Inc
PRIORITY	Sept. 12, 1997
ISSUED	Sept. 28, 1999
EXPIRED	Sept. 12, 2017
STATUS	Expired - Lifetime

From patents.google.com, copy of Nov. 3, 2026. 3 of 3 record checks passed.

8	● 3	◐ 5	○ 0	3/8	5	56/67	Nov. 3, 2026
CLAIM ELEMENTS	DOCUMENTED	PARTIAL	NOT FOUND	QUOTES VERBATIM ON PAGE	SOURCES QUOTED	CHECKS PASSED	RESEARCHED AND CHECKED

CLAIM 1 (VERBATIM)	PUBLIC EVIDENCE	BASIS AND CHECKS
1[pre] A method of placing an order for an item comprising:	● DOCUMENTED > "1-Click securely stores billing and shipping information so that each customer needs only one click of the mouse to buy a selected item, rather than entering the same information over and over again for each purchase."[1] Amazon describes 1-Click as a way to buy a selected item with one click using stored billing and shipping information.	CONFIDENCE: HIGH ● Quote and source ● Quote on page ● Non-patent source ● In research basis ● Dated Dated Oct. 11, 1999, during the patent term.
1[a] under control of a client system, displaying information identifying the item; and	● DOCUMENTED > "This page will contain information about the specific product and will have an option to 'buy now with 1-Click.'"[2] The court record describes an Amazon product detail page containing information about the product and a 1-Click purchase option. The page does not show a publication date in the evidence reviewed.	CONFIDENCE: MEDIUM ● Quote and source ● Quote on page · verbatim on an older copy of 2026-02-13; a fresh copy was not available ● Non-patent source ● In research basis ● Dated · no date on the page

1. *Amazon.com Receives Patent for 1-click*, press.aboutamazon.com (Oct. 11, 1999), https://press.aboutamazon.com/1999/10/amazon-com-receives-patent-for-1-click (last visited Nov. 3, 2026).
2. *IPXL Holdings, LLC v. Amazon.Com, Inc., 333 F. Supp. 2d 513 (E.D. Va. 2004)*, law.justia.com, https://law.justia.com/cases/federal/district-courts/FSupp2/333/513/2500769/ (last visited Feb. 13, 2026).

CLAIM 1 (VERBATIM)	PUBLIC EVIDENCE	BASIS AND CHECKS
1[b] in response to only a single action being performed, sending a request to order the item along with an identifier of a purchaser of the item to a server system;	◐ PARTIAL > "1-Click securely stores billing and shipping information so that each customer needs only one click of the mouse to buy a selected item, rather than entering the same information over and over again for each purchase."[3] Amazon describes buying a selected item with one click; a court opinion separately says cookies transferred a sessionID in the accused system. The public evidence reviewed does not establish that a purchaser identifier was sent with that specific one-click order request.	CONFIDENCE: MEDIUM ● Quote and source ● Quote on page ● Non-patent source ● In research basis ● Dated Dated Oct. 11, 1999, during the patent term. 1 more supporting source in Appendix B.
1[c] under control of a single-action ordering component of the server system, receiving the request;	◐ PARTIAL > "By choosing the 'buy now with 1-Click' option from this product detail page, the user initiates the product ordering and shipping process."[4] The court record describes the 1-Click option initiating the ordering and shipping process. It does not describe receipt by a particular server-side single-action ordering component.	CONFIDENCE: MEDIUM ● Quote and source ● Quote on page · verbatim on an older copy of 2026-02-13; a fresh copy was not available ● Non-patent source ● In research basis ● Dated · no date on the page
1[d] retrieving additional information previously stored for the purchaser identified by the identifier in the received request; and	◐ PARTIAL > "Amazon's customers can store payment information and shipping addresses in their Amazon customer accounts. This information can then be retrieved later when that customer uses the 1-Click features."[5] The appellate opinion says customer payment and shipping information is stored and can later be retrieved when the customer uses 1-Click. It does not expressly tie that retrieval to a purchaser identifier in the received request.	CONFIDENCE: MEDIUM ● Quote and source ● Quote on page · not on the page, copy of 2026-11-03 ● Non-patent source ● In research basis · not among this element's citations ● Dated Dated Nov. 2, 2011, during the patent term. 1 more supporting source in Appendix B.

3. *Amazon.com Receives Patent for 1-click*, *supra* note 1.
4. *IPXL Holdings, LLC v. Amazon.Com, Inc., 333 F. Supp. 2d 513 (E.D. Va. 2004)*, *supra* note 2.
5. *Amazon.com, Inc. v. Barnesandnoble.com, Inc., No. 00-1109 — U.S. Court of Appeals, Federal Circuit Opinion*, storage.courtlistener.com (Nov. 2, 2011), https://storage.courtlistener.com/harvard_pdf/772066.pdf (last visited Nov. 3, 2026).

CLAIM 1 (VERBATIM)	PUBLIC EVIDENCE	BASIS AND CHECKS
1[e] generating an order to purchase the requested item for the purchaser identified by the identifier in the received request using the retrieved additional information; and	◐ PARTIAL > "The customer's 1-Click order is placed in a holding state for 90 minutes."[6] The court record describes a 1-Click order being placed and later finalized if not cancelled. The evidence does not specify that the order is generated using information retrieved for a purchaser identified in the request.	CONFIDENCE: MEDIUM ● Quote and source ● Quote on page · verbatim on an older copy of 2026-02-13; a fresh copy was not available ● Non-patent source ● In research basis ● Dated · no date on the page
1[f] fulfilling the generated order to complete purchase of the item	● DOCUMENTED > "Amazon then checks which items it can group together, calculates shipping costs, and then sends your order out for delivery."[7] The 2017 description of Amazon 1-Click says Amazon sends the order out for delivery after grouping items and calculating shipping costs.	CONFIDENCE: MEDIUM ● Quote and source ● Quote on page ● Non-patent source ● In research basis ● Dated Dated Aug. 2, 2017, during the patent term.
1[g] whereby the item is ordered without using a shopping cart ordering model.	◐ PARTIAL > "Once activated, you can skip the standard checkout process and buy something by clicking a single button."[8] The guide describes 1-Click as skipping standard checkout with a single button. It does not expressly establish that the ordering route avoids a shopping cart model.	CONFIDENCE: MEDIUM ● Quote and source ● Quote on page · page could not be fetched; check by hand ● Non-patent source ● In research basis ● Dated Dated Aug. 2003, during the patent term.

Appendix B · Research basis

For each element: Parallel's reasoning, its confidence, and every source it cited. The quoted source is marked ▸.

1[pre] DOCUMENTED · CONFIDENCE HIGH

Amazon's 1999 release directly describes purchasing a selected item with one click and using stored billing and shipping information.

▸ Amazon.com-Receives-Patent-for-1-click - US Press Center · press.aboutamazon.com/1999/10/amazon-com-receives-patent-for-1-click

1[a] DOCUMENTED · CONFIDENCE MEDIUM

The court record states that the product detail page contains information about the specific product and a 1-Click option.

▸ IPXL Holdings, LLC v. Amazon. Com, Inc., 333 F. Supp. 2d 513 (E.D. Va. 2004) :: Justia · law.justia.com/cases/federal/district-courts/FSupp2/333/513/2500769/

1[b] PARTIAL · CONFIDENCE MEDIUM

The release documents one-click purchase; the appellate opinion separately states that cookies transferred a sessionID in the accused system. The evidence does not explicitly connect that identifier transfer to the same one-click order request.

▸ Amazon.com-Receives-Patent-for-1-click - US Press Center · press.aboutamazon.com/1999/10/amazon-com-receives-patent-for-1-click
Cordance Corp. v. Amazon.com, Inc., No. 2010-1502 — U.S. Court of Appeals for the Federal Circuit Opinion · storage.courtlistener.com/recap/gov.uscourts.ded.36947.600.1.pdf

1[c] PARTIAL · CONFIDENCE MEDIUM

The court record describes the customer initiating the ordering and shipping process through the 1-Click option, but does not identify a server-side component receiving the request.

▸ IPXL Holdings, LLC v. Amazon. Com, Inc., 333 F. Supp. 2d 513 (E.D. Va. 2004) :: Justia · law.justia.com/cases/federal/district-courts/FSupp2/333/513/2500769/

1[d] PARTIAL · CONFIDENCE MEDIUM

The opinion states that payment details and shipping addresses are stored in customer accounts and can later be retrieved when that customer uses 1-Click; it does not explicitly state that the request identifier selects that customer.

Cordance Corp. v. Amazon.com, Inc., No. 2010-1502 — U.S. Court of Appeals for the Federal Circuit Opinion · storage.courtlistener.com/recap/gov.uscourts.ded.36947.600.1.pdf

1[e] PARTIAL · CONFIDENCE MEDIUM

The court record confirms an order is placed in a holding state, but does not explain order-generation mechanics using information retrieved for an identified purchaser.

▸ IPXL Holdings, LLC v. Amazon. Com, Inc., 333 F. Supp. 2d 513 (E.D. Va. 2004) :: Justia · law.justia.com/cases/federal/district-courts/FSupp2/333/513/2500769/

1[f] DOCUMENTED · CONFIDENCE MEDIUM

The 2017 article states that Amazon sends the order out for delivery after checking grouping and shipping costs.

▸ What Is 1-Click Ordering On Amazon and How Does It Work? · www.howtogeek.com/320394/what-is-1-click-ordering-on-amazon-and-how-d…

1[g] PARTIAL · CONFIDENCE MEDIUM

The 2003 guide says 1-Click skips standard checkout, but does not specifically say it bypasses the shopping cart ordering model.

▸ Enable 1-Click Buying - Amazon Hacks [Book] · www.oreilly.com/library/view/amazon-hacks/0596005423/ch02s04.html

Appendix C · Verification log

Every check run on this exhibit. Green passed, amber needs a person to look, red failed; details for every flag follow the grid.

CLAIM LANGUAGE
Extract API on patents.google.com, copy of Nov. 3, 2026. Split into elements in Python; no model writes claim text.

EVIDENCE
Task API, pro processor, patent databases excluded.
`srun_728f2b03f51547d3dfac42667b3dddba`

PRIOR ART
Task API, pro processor, dates enforced in Python.
`srun_728f2b03f51547d31c23de36dda4f006`

QUOTES, SOURCES AND DATES
Extract API re-reads every cited page from a copy at most a day old; Python compares each quote word for word and checks domains and dates.
